Toyota Tacoma Prerunner 2wd '05-09
Toyota 4-Runner 2wd '03-09

Toyota FJ Cruiser 2wd '07-09

Part Nbr = CAM-310029 (Stock or long travel suspension with sway-bar provision)

Part Nbr = CAM-310030 (Stock or long travel suspension with no sway-bar provision)

Retail price = \$995.00/pr

Camburg Engineering's all new 4.0 spindles are a great solution for larger tires and factory ride or much need clearance for larger tires with their bolt-in 2.5 coilovers or long-travel kit. This new design is much stronger than the factory unit giving you strength needed for extreme off road use. They are CNC machined, fully fabricated with an internally gusseted boxed design and add 3/4" width per side to correct spindle offset as well as more tire clearance. The steering arm angle is repositioned to eliminate binding on the factory outer tie rods at full droop. With Camburg's superior strength you can still utilize the factory sway bar on stock applications or mid travel setups. These spindles are machined and manufactured 100% in-house for the highest quality & control.

Specs:

- 4" of added lift and ground clearance
- 3/4" wider per side for increased track width and clearance
- Fabricated box structure with internal gussets and CNC machined hub center
- Steering arm re-positioned to improve tie rod angle
- Speed sensor inside of spindle for added protection
- Includes high strength 12pt alloy hardware
- Powder coated matte black finish

Notes:

- Requires use of longer brakes lines available through Camburg Engineering. Specify suspension type.
- These spindles are designed to be used with stock suspension or Camburg approved suspension kits. They were not designed to be used in conjunction drop down bracket kits.
- Maximum wheel backspacing = 4.50"
